- **Quality Standards:**  
ISO 17034:2016 – General Requirements for the Competence of Reference Material Producers A2LA Certificate Number 6132.01, Certified Reference Materials  
  
ISO 9001:2015 – Quality Management System – Requirements  
NSAI Registration Certificate Number 19.4411.
- **Manufacturing:** Prepared Concentrations are determined through use of volumetric measurements of known source materials. All pipettes are calibrated annually by ISO/IEC accredited providers. Volumetric flasks are serialized and calibrated to ISO 17025 standards.
- **Homogeneity:** This product is sufficiently homogeneous, and any sample size would be within the stated uncertainty. Minimal sample (injection) size is 3  $\mu$ L.
- **Stability:** The manufacturer guarantees the stability of this solution through the expiration date stated on the label, when handled and stored according to the conditions stated on the label.
- **Uncertainty of Certified Properties:** Reference material was produced by dilution from source material with known concentrations and uncertainty of constituents. ISO 17025 Calibrated pipettes and volumetric flasks with known uncertainties were used in the manufacturing process. Uncertainty was calculated following guidance from ISO Guide 35:2017.

$$u_{CRM} = \sqrt{u_{MFG}^2 + u_{BB}^2 + u_{LTS}^2 + u_{TS}^2}$$

A combined standard uncertainty for the product ( $u_{CRM}$ ) was calculated based on the combined uncertainties of elements used in the manufacturing process ( $u_{MFG}$ ), within batch inhomogeneity ( $u_{BB}$ ), long-term stability ( $u_{LTS}$ ) and transport stability ( $u_{TS}$ ). The relative standard uncertainty for the product is expanded with a factor of k=2 not to exceed  $\pm 9.6\%$ .
