Comprehensive Training – Your Way

To meet our customers' current training needs – we are excited to offer online training for the NexION® 2000, 1000, 350 and 300 series!

The online training program is designed to closely emulate the in-class training experience and is instructor led. Class sizes are controlled to maximize each trainee's learning experience.

Theory is delivered via web, group exercises and discussions are conducted using simulation software, and several laboratory exercises are emulated to ensure learning effectiveness.

The topics covered are:

• ICP-MS hardware and software fundamentals
• ICP-MS theory
• User maintenance
• Instrument optimization and conducting analysis
• Method design and optimization
• Interferences and correction tools (including cell technology)

Training Option 1 – Full training

1. The user receives three days of online training on the topics covered.
2. In addition, the user is welcome and encouraged to attend two day of in-person training at a PerkinElmer tech center when practical.

Part Number: N0200193 - one seat FREE with the purchase of a new instrument

Training Option 2 – Online portion only

User receives three days of online-only training on the topics covered. In-person tech center lab exercises not included.

Part Number: N0236069
